

A wheeled patient evacuation device for moving immobile hospital patients and nursing home residents in an emergency. One design, built in three models on the same underside wheel and roller system.

FDA Class I medical device · Product code FMR, 510(k) exempt · 21 CFR 880.6785, manual patient transfer device

Underside wheels, head end to base of spine

#ESA

#ESGO

Underside view, both models, head end at bottom

COMMON TO EVERY EVACUSLED

- **Built-in underside multi-wheel roller system**, so the device rolls rather than drags
- **Multiple internal spinal support boards** for added patient protection
- **Built-in underside foot-end braking system** for controlled stairwell descent
- **Acts as a true surge bed** for patient holding and triage
- **Built-in foot cover** for extra security and storage
- **Antifungal, antibacterial, fire-retardant** mattress cover material that wipes down
- **No assembly required**; reusable and repackable
